Generous Donors

Cover Story:
CRC ‘Retools in the Fight’
with an Olympus BX51 Fluorescence microscope.
At CRC, we are fighting cancer, hoping you won’t need to. Our extensive cancer research is funded in large part by the citizens and businesses of central Missouri who, like yourselves, desire a solution to this lethal disease. Because of the extensive cancer research that is being performed all over the world, including right here in Columbia, we are going way beyond poisoning, radiating, and cutting out cancer cells. We are developing procedures to stop cancer before it ever starts and techniques to treat it that avoid destroying good cells.

**CRC Mission**

We conduct and sponsor research to reduce cancer deaths by earlier detection, novel therapies, and identification of environmental and nutritional components that reduce tumor initiation.
Dear Friends,

Cancer Research Center’s greatest assets are its Board, volunteers, donors, and staff.

Research would not be possible without the assistance of our donors. Whether donating to the Jim Kidwell Memorial Gala, responding to our annual mailing, or sending a memorial or tribute to a loved one, the dollars given to the Cancer Research Center are spent in our laboratory in Columbia, Missouri.

Cancer Research Center staff are not only dedicated to the research, but also interested in stretching our funds as far as possible. Dr. Abraham Eisenstark, CRC Research Director, is the best example of this type of thinking. In tribute to his many years of commitment to cancer research and Cancer Research Center, Dr. Eisenstark will be the 2011 Jim Kidwell Memorial Gala honoree. We are delighted to recognize Dr. Abe for all that he has done for the cancer research community.

As an example of his love for research, Dr. Abe established the Roma Eisenstark Scholars program. Due to his own generosity, students come to our laboratory and are given a research project of their own. They are graduate students, undergraduate students, and even high school students. Read more about our Roma Eisenstark Scholars on page 8.

The CRC volunteer committee comes together every year to plan and execute the gala, which is our one annual fundraiser. They sell tickets, tables, and sponsorships. They solicit donations for the silent and live auctions. They help set up before the event and clean up after it is over. The Jim Kidwell Memorial Gala would not be possible without this dedicated group of friends. Read more about the 2010 event, honoring long time CRC volunteer, Myrtle Rapp, and see photographs on page 16.

Behind every successful organization is solid leadership, and CRC is no exception. Our Board of Trustees is a diverse group of individuals who donate their time, expertise, and financial resources to CRC. They truly have CRC’s best interest at heart and are dedicated to helping CRC accomplish its mission.

As you are reading this report, be sure to know you are making a difference in the lives of cancer patients. Thank you for your hard work and generosity. You are vital to CRC’s success. We look forward to continuing this great work in 2011.

Wishing you good health and prosperity,

Marnie H. Clark
Administrative Director
Jack Bozarth is the Director of Development at the CRC. He is responsible for fund raising and public affairs. He is a retired Air Force Officer who was the Public Affairs Officer for the Commissioner of Military Affairs of the state of Alaska. He is married to the former Ann Freese of Columbia and has three children and four grandchildren. Born in Kansas City and raised in Raytown, Missouri. He is a graduate of Central Missouri State University and was awarded a MS degree by Embry-Riddle Aeronautical University. He is a member of the Columbia Elks Lodge No. 594, Missouri Aerie 2730 of the Fraternal Order of the Eagles, and Twilight Lodge No. 114 AF&AM.

Meet the CRC Staff

Abraham Eisenstark is the Research Director of the CRC. Previously, he was a Byler Distinguished Professor and Director of the Division of Biological Sciences, University of Missouri - Columbia. He has served as Program Director of Molecular Biology Section, National Science Foundation, Washington, DC. His career includes years of collaborative research at other institutions, including universities at Copenhagen, Denmark; Leicester, England; Paris, France; Leiden, Netherlands; and Brookhaven National Laboratories. He is a native of Kansas City, MO. He received his BS, MS, and PhD. in Microbiology from the University of Illinois. He is married to the former Joan Ragsdell of Columbia and is the father of three children.

Marnie Clark is the Director of the CRC and has been with the organization for more than 16 years. She has served as Development Director from 1994 to 1999, and was a member of CRC’s Board of Trustees from 1999 to 2001 while working at William Woods University. She has extensive experience in public relations and association management. Marnie is a member of Columbia Metro Rotary, Fraternal Order of Eagles Auxillary, Columbia Elks Lodge and Cosmopolitan Luncheon Club. She is an active member of the Columbia Chamber of Commerce where she has chaired the Chamber Ambassadors, as well as various committees. She was a 2003 recipient of the 40 under 40 in Columbia Award and is a graduate of Leadership Columbia. She earned a BFA degree from William Woods College. Marnie lives in Fulton with her husband Michael and their children, Bailey, Brian, Dustin & Austin.

Alycia McGee joined the CRC team in July of 2008. She is dedicated to managing the database, photographing special events and lab research projects along with designing the Annual Report. She was born in Mexico, MO where her father still resides. She graduated from Centralia High School and earned her Bachelor’s degree at Columbia College. Through the years, she found her passion for photography after the loss of her mother to breast cancer. Since then, she has worn the hats of an artist, a photographer and an office manager and is proud to combine all of her talents at the Cancer Research Center. She resides on a quiet little street in southern Columbia.

Jack Bozarth

Abraham Eisenstark

Marnie Clark

Alycia McGee

Meet the CRC Staff
**Meet the CRC Staff**

**Alison Fea**

is the Senior Technician and Laboratory Manager of CRC. A New Jersey native, she attended Stephens College in Columbia prior to joining the CRC in 2002. During her time as an undergraduate, she served as the Chemistry Laboratory Assistant for the college’s Natural Science Department and served as an officer in several honor societies. The summer of her junior year she was elected to Sigma Xi, the Scientific Research Society, for her HIV-1 research work when she was an infectious disease intern in Galveston, TX. She graduated Magna Cum Laude from Stephens in 2002, with a BS in Biology and a minor in Chemistry. She is the eldest of three; her family now resides in Lawrence, KS.

**Dr. Robert A. Kazmierczak**

came to CRC as the Raymond W. Freese Fellow. He now serves as Senior Investigator. He received his BS in Bacteriology at the University of Wisconsin, studying regulation of Vitamin B12 production by *Salmonella enterica* (serovar Typhimurium) and interning at Upjohn Pharmaceuticals. He earned a MA and PhD in Microbiology from the University of Illinois, during which time he held an NIH Cell and Molecular Biology Training Grant Fellowship to research chronic viral infections. He later studied at Washington University in St. Louis. At the CRC he is conducting research to characterize and develop therapeutic *Salmonella enterica* as a treatment for prostate cancer.

**Jacki Kian Mehr**

was born and raised in Jefferson City, MO. She is the youngest of six children. Jacki attended Jefferson City High School and graduated in 1984. While in high school, she worked on a research project on embryo transfer. Jacki attended CMSU and there she met her husband of 25 years. They have four girls ages 24, 22, 9 and 7. Along with being a homemaker for 19 years, Jacki was an advocate for the disabled. Since then she has returned to her love of research at the Cancer Research Center.

**Dr. Chengzhi Wang**

is from China. He attended Medical School at Southeast University, China, and graduated in 2006. Later he turned to bioscience to pursue his Ph.D. at Peking University Health Science Center in Microbiology since 2007. In November, 2009, with the support of the Chinese government, he came to America as a visiting student and joined the CRC. At the CRC, he is working on the project of therapeutic *Salmonella enterica* as a treatment for prostate cancer along with his colleagues. He is the only son of his parents and married his wife in Beijing in 2009.
Reaching out to the Community

Sam’s Club Jeremy Jesse presents a check to CRC’s Administrative Director, Marnie Clark.

A $5,000 check was presented by Cancer Charity Co-Chairs Jim Houston and Ilene Sapp to Marnie Clark, Administrative Director of the Cancer Research Center in Columbia, Missouri. Marnie expressed her “special thanks” not only for this donation, but for all the charity work and donations made by our Aerie Home throughout the year. This donation included a Grant received from the Grand Fraternal Order of Eagles.

Marnie Clark, Charlotte Acton, OES PGM, Betty Crigler and Alycia McGee

Marnie Clark, Alycia McGee & Alison Fea anxiously await the arrival of the Missouri State Employees in Jefferson City at the 2010 MSECC Kick-Off.

Patricia’s Foods Michelle McAreavy, Todd White and Floyd Durk present a check to Marnie Clark from the wine tasting event.
This has been another significant year of research at CRC! Thank you, generous supporters!!! You are, indeed, an important factor in this progress.

As reviewed elsewhere in this Annual Report, we have genetically engineered bacterial organisms so that they destroy tumor cells without harming normal cells.

We are now in the process of testing the ability of these genetically engineered bacteria to reduce tumor size and substantially increase life expectancies of our mice with prostate cancer. To accomplish this, we are vigorously seeking the necessary funds from granting agencies, capital investors and as always, from our generous donors.

In addition to our in-house research, CRC is always proud of its student scholarship program. As in the past, our high school and college undergraduate trainees, with their passion for careers in cancer research, are destined for positions in the best laboratories. These talented students are now preparing for careers in medical research at MIT, Mount Holyoke, Rice and UMC. Note their bright faces in the Scholars to Scientists section of this Annual Report.

Thank you so much for your continued confidence in our experiments aimed at reducing cancer mortality.

With our best wishes for your good health,
Sincerely,

Abraham Eisenstark
Byler Distinguished Professor, Univ. Missouri [emeritus]

Ps. Each of us has lost a family member or friend to cancer. A warm way to remember that person is with a memorial gift. As an example, I have established the Roma Eisenstark Cancer Research Memorial Fund, to be used for student scholarships, laboratory assistance, and for support of speakers for the Roma Eisenstark Memorial Lectureship in Cancer Research, UMC.

Previous Roma Eisenstark memorial lecturers have included Nobel Prize winners Harald Zur Hausen and Howard Termin. Other speakers were from M.D. Anderson Cancer Center, Yale, U.Calif.-Berkeley, U. Chicago, Stanford, Scripps Research Inst., Human Virology, Ludwig Inst.-San Diego, Dana-Farber/Harvard Cancer Center, and Cancer Genetics Program/NIH.

The speaker for 2010 was Professor Janet Butel, Distinguished Professor, Baylor College of Medicine. Dr. Butel's interest in cancer research started when she was an undergraduate in Dr. Eisenstark's laboratory.
From Scholars to Scientists

Building the Next Generation of Cancer Researchers

**Elizabeth Choe**
declared Biological Engineering as her major last year at MIT. Aside from course work, she is working in Professor Bhatia’s Laboratory for Microscale Regenerative Technologies on a project similar to the one she studied at CRC, which involved the improvement in efficiency of gold nanoparticles in the treatment of cancer. She also enjoys her music and continues to play in the symphony along with her chamber group.

**Gloria Lee**
has been examining the invasion rates of *Erwinia Carotovora* and *E. herbicola* on PC-3M Prostate tumor cells as a Roma Eisenstark Scholar during the summer of 2010. Gloria is a Junior at Mount Holyoke College and has been involved in cancer research with CRC since the summer of 2006. She is currently pursuing a career in biomedical research.

**Kristin Morrison**
daughter of Clark and Susan Morrison from St Louis, is a senior biology major at the University of Missouri. She has been researching at the CRC since October 2007. Kristen is collaborating with UMC professor Heide Schatten to investigate how our attenuated bacterial therapy kills cancer cells by destruction of mitochondria. Next year, she’s going to medical school and plans to supplement her MD with a Master’s in Public Health.

**Meredith Norfleet**
is a member of the Discovery Fellows Program. She is from the small town of Houstonia, Missouri and is a graduate of Northwest High School. She is majoring in biology at the University of Missouri Columbia.

**Mark Won**
is a Junior at Hickman High School. He is the son of Yonggumn Won and Hyun-mee Hong. Mark was introduced to CRC due to his interest in science and microbiology. Mark’s goal is to become a patent lawyer in science and law.
Fine wine, cheese and good friends only get better with age. Microscopes on the other hand, age like rock stars. Our previous microscope faired very well providing better than two decades of faithful service before the optics, the heart of a microscope, degraded to the point where replacement was unavoidable. The microscope was so far behind current optical prowess that it was not prudent to make the repairs. In short, it was time for an upgrade.

Thanks to the generous support of our donors the Cancer Research Center was able to welcome a “state of the art” Olympus BX51 Fluorescence microscope into the lab this fall. For those unfamiliar, a fluorescence microscope uses special filters to select precise wavelengths of light, which are used to excite special dyes and cause them to fluoresce or glow. Since each filter is selective for a different wavelength range, we can stain tumor cells with several dyes and then view different components of the tumor cell separately. This allows us to get many times the information from a single tumor sample and then overlay the information for a complete 3D picture. Images are captured by a digital camera and supporting software capable of real-time recording of both still and time-lapse images. These publication-ready images are already finding their way into our research reports and grant proposals.

Overall, the BX51 was a stand-out choice due to it’s sturdy construction, user-friendly design, outstanding support services and the fact that it is easily upgradeable should our needs change in the future. Ensuring this “rock star” will be on the charts for years to come.
Let's face it. The current gold standards of cancer treatment, chemotherapy and radiation, are really bad shots. Yes, they kill cancer cells but they also hit all of the other living, normal cells and tissues in range. If these treatments were police academy recruits they would never see graduation day. At the Cancer Research Center we think it's high time for some new recruits.

So, we started our search from the beginning and found that the idea of recruiting bacteria as a cancer treatment has been steadily gaining momentum for sometime. Way back in the early 1900's William B. Coley for example observed that sarcoma patients who acquired a severe *Clostridium* infection fared better after surgery than patients who did not. In the years that followed Dr. Coley developed a cancer treatment regimen involving bacteria cell walls at what is now Memorial Sloan-Kettering Cancer Center (Coley, 1929). Fast forward sixty years and treatment with a non-pathogenic strain of *Bacillus* bacteria is being used to treat superficial bladder carcinoma in patients with complete tumor responses in more than 60% of the patients treated (Friberg, 1993). Early in the new millennia prostate cancer research joined the scene when researchers at Yale developed a strain of *Salmonella typhimurium* dubbed VNP20009 that preferentially killed prostate cancer cells. Initial results were promising but Yale researchers ran into toxicity issues with the strain in phase 1 clinical trials.

Even stalemated the proposition is exciting. If Yale researchers had made it to phase 1 trials with a tempered pathogenic strain we were likely sitting on the answer. The Cancer Research Center is fortunate to possess a very unique resource in the form of several thousand non-pathogenic archival *Salmonella* strains all slightly different genetically. These strains have been stored so long (50+ years) they have naturally lost the ability to cause disease. In near starvation conditions and with no mammalian host in sight, these strains dumped their pathogenic genes in an effort to streamline themselves for survival. Their genetic losses are our gain.

In 2004, we began combing our archival *Salmonella* collection for star recruits. Each selected *Salmonella* strain was tested for tumor targeting talent by incubating the strain with cancer cells. We found that within 30 minutes the non-toxic *Salmonella* attached to the cancer cells and did not let go. Even better was that the *Salmonella* seemed to know the difference between a normal and a cancerous cell and only attached to and killed the cancerous cells. This was the first promise of a smart, targeted cancer treatment using bacteria from the CRC.

In 2005, we upped the ante and started running time course experiments to gauge the behavior and tumor destruction talents of the *Salmonella* over time. These studies revealed a unique advantage over Yale's VNP20009. Unlike VNP20009, our naturally mellowed *Salmonella* did not break open the cell while destroying it. A small but crucial detail as loose cell contents are a major “red flag” in the body and get the immune system working overtime. While activation of the immune system is desirable in cancer treatment, too zealous of a response can be disastrous for the patient.

2006 began the painstaking process of fine-tuning the therapeutic strain to further enhance the strain's nontoxic nature and natural tumor targeting talent. During this time one of the several strains we initially investigated became a clear frontrunner for the therapeutic *Salmonella* title. This strain became known as CRC 2631.

2007 brought hard-won approval to test CRC2631 for toxicity and tumor targeting ability in mice.
Deeming our research worthy to proceed beyond lab-cultured cells, this approval was a major victory and milestone on the way to human clinical trials. We acquired mouse facilities at the University of Missouri Columbia and determined safe and effective dosage levels to treat the primary and secondary tumors TRAMP mice develop. We were excited to find that the TRAMP mice easily tolerated doses of over 100 million therapeutic CRC2631 bacteria. In contrast, just 10 non-therapeutic or Salmonella as found in the wild will kill a mouse within three days.

Following promising toxicity trials we turned our attention to tracking the bacteria in the mouse. Testing which carried over into 2008 repeatedly showed that within 24-48 hours our therapeutic Salmonella was eliminated from the body of TRAMP mice and only retained in the tumor. We also continued to see CRC2631 target cancer cells 1,000 times over normal cells in the mouse even as we made genetic changes to fine-tune the bacteria’s performance.

In 2009, we developed dosage protocols and conducted therapeutic studies to determine the dosage of CRC2631 therapeutic Salmonella to give to the TRAMP mice to inhibit, reduce, and/or eliminate their tumors. Normally, TRAMP mice do not make it to one year of age due to their predisposition to produce large prostate tumors at a young age (3-6 months). The goal is to have them live to a ripe old age, which for this species of mice is about two years. These studies continued into 2010.

A second critical objective was reached in 2009 with the development of a quantitative assay to measure the number and type of cancerous cells that our therapeutic Salmonella preferentially attack. Using a Fluorescence Activated Cell Sorting (FACS) system we are able to count individual cancer cells and determine how effectively our bacterial therapy attaches and destroys them. This new assay helps us identify bacterial strains with improved cancer-targeting capabilities and to determine exactly how proficient the bacteria are at targeting different types of cancer. We now use this system to identify strains with enhanced cancer-targeting capabilities and will use it to screen for strains attracted to other cancer types such as melanoma, pancreatic, breast and colon.
Targeted Bacterial Cancer Therapy Matures (2010 and Beyond)

Cancer research focuses on the three requirements for treating cancer: 1) Early Detection. Cancer detected early is treatable and almost always results in complete recovery. 2) Targeted Treatment. If you can target a cancer-killing drug therapy to the cancer cells but spare normal cells, you can administer powerful, effective drugs at much lower dosages, killing the cancer while minimizing or eliminating unwanted side effects. 3) New, Effective Chemotherapy. Although different types of cancer result in the same problem (uncontrollably growing tumors), each cancer type is different and reacts differently to anti-cancer drugs.

In 2010, an estimated 217,730 men will be newly diagnosed with prostate cancer in the United States and about 32,050 men will die from the disease. Prostate cancer is associated with aging and occurs in a latent or clinical form in 30-40% of men by age 40-50. Prostate cancer cases increase substantially in men over 50 years of age. While hormone chemotherapy is often effective during the initial stages of cancer development, most men develop hormone-resistant cancer within two years after treatment of the clinical disease and metastatic lesions are difficult to cure. Therefore, new approaches are desperately needed.

Building on the hard work and success of the last six years, in 2010 we performed experiments to test the effects of our non-toxic bacterial cancer targeting (BCT) therapy on the immune systems of our TRAMP mice. These experiments gave groups of prostate tumor-bearing mice a range of *Salmonella* doses weekly over a period of 12 weeks and measured the effects of BCT therapy up to 24 hours after each dose. None of the mice dosed at our therapeutic levels died during this study and immunological tests for inflammation after repeated doses were negative, demonstrating that our BCT therapy could be given repeatedly to immunocompetent mouse models without causing an immune reaction. Confirmation that our BCT therapy does not cause an immune reaction after repeated doses is an important hurdle on the way to human clinical studies, and shows that we can dose a patient with BCT therapy that can carry a drug cocktail or other anti-cancer drug to the heart of tumors, maximizing their therapeutic effect. (Figure 1)

In the summer of 2010 we performed our first attachment of gold nanoparticles to our BCT therapy, demonstrating that we could attach nanoparticle therapeutics to our *Salmonella* that could serve as a target for specifically destroying tumors with lasers and could eventually be modified to carry drugs for release at the tumor

![Figure 1 TRAMP prostate cancer mouse model.](image1)

![Figure 2 Attachment of nanoparticles on outer perimeter of cancer targeting (2631) cells.](image2)
Nanoparticle work, including testing different nanoparticles and drug formulations, will continue in 2011 and improve the cancer-killing effectiveness of our BCT therapy. (Figure 2) In addition to carrying additional cancer therapies to the tumor site, nanoparticles can also be used as an important cancer-detection diagnostic tool as they are easily detected in the body and will be used to confirm that the therapy being used is properly concentrating at the tumor site inside our animal cancer model and eventually, our clinical cancer patient.

Work on the BCT therapy to date has attracted the interest of other cancer research facilities, including Immunophotonics, Inc. The CRC has entered into a collaboration with Immunophotonics to determine if BCT therapy can be successfully combined with Immunophotonics, Inc. therapeutic technologies that are already in FDA clinical testing for use in the USA and being successfully used in clinics in Peru. We are continuing this research partnership in 2011.

We also continue to search for and select bacterial strains with improved targeting capabilities. In 2010, visiting CRC Scholar Dr. Chengzhi Wang developed an improved protocol for generating strains that target prostate cancers in our animal prostate cancer model and is continuing his work to make a better targeting strain in 2011. Dr. Kazmierczak, with the assistance of our CRC student interns, is selecting and screening new bacterial species for their ability to attach to human prostate cancer cells in culture. (Figure 3) This work is expected to continue throughout 2011 and will yield important information about the nature of bacterial attraction to cancer cells and tumor masses. As strain generation progresses we will also be looking for stains with targeting ability for melanoma, pancreatic, colon and breast cancers. This work will be done in tissue culture and will lay the groundwork for approval for animal model studies of these cancer types in the future.

Each year we build on the success of previous years as we continue the development of a bacterial cancer therapy. It seems like only yesterday the idea of scouring our unique collection of archival *Salmonella* for a new weapon against cancer was born. Thanks to our generous supporters and hard work our *Salmonella*-based bacterial cancer therapy is making great progress on the way to becoming an effective treatment in the fight against cancer.

“Now, let me tell you something............”

That’s how Myrtle Rapp, seemingly, always started her statements. So, let us tell you something about the lady we loved so much and gave us all more than any of us could have ever imagined.

As her grandkids, we remember her as “the best grandma in the world” who would spend “countless nights around the old chopping block spreading her many words of wisdom.” She was “the sweetest, most caring person in the world” and “words couldn’t describe the way she had influence over so many lives”. She was “full of Tiger Spirit” and “Gillespie Bridge’s own celebrity.”

As her children, we recall, “You need to establish the difference between your family, friends and coworkers. Years later I realized what she said, family are friends, friends are family and her coworkers and patients were friends and family, too.” “She was beautiful, generous and always sharing” and “Mom was so many different things.”

“My wonderful wife loved to garden, can the produce and cook. She was the best cook in the Midwest. She never learned to swim or ride a bike due to living on the farm. She became a good water skier and snow skier. She would ride a motorcycle with me going 100 miles an hour, thru the Rocky Mountains and Old Mexico. She was always prepared for snow trips, river trips on the Mississippi, Missouri, and Arkansas Rivers. And, you had to take what she had prepared whether you wanted to or not.

She loved her kids, grandsons, and great grandsons. If Myrtle knew you, she loved you and always had a helping hand for everyone. She talked to her flowers and her garden plants as she was sitting in the garden working with them in her night gown!! She loved life. Thanks Myrtle for a great life.

I love you. -Billy”

We thank you all for honoring our best friend and for continuing to support an effort that was so very important to her.

Why Me?  
By Dr. Pamela Dunn Papernov  
A GIN Scientist, who lost her battle with cancer in 1963  

Why me? You ask,  
why not me? I say,  
I’ve done nothing so terrible  
that I deserve to have cancer.  
I’ve done nothing so noble  
that I deserve to be spared.  
I have had a bit of a rude awakening,  
but better than none at all!  
Some people never wake up,  
most oversleep.  
Thank God, I’ve had a chance to see  
the sunrise.  

Dr. Pamela Dunn Papernov’s spirit lives on and continues to fight against cancer through the Pamela Dunn Legacy memorial gifts in her honor.

The Order of the Eastern Star is the largest fraternal organization in the world to which both men and women may belong. Worldwide, there are approximately one million members under the General Grand Chapter. Eastern Star is a social order comprised of persons with spiritual values but it is not a religion. Its appeal rests in the true beauty of the refreshing and character-building lessons that are so sincerely portrayed in its ritualistic work. A deep fraternal bond exists between its members. It is the wholesome relationship of sisterly and brotherly love brought about through high principles exemplified in their lives which makes them near and dear to each other. While this is an Order composed of people of deep spiritual convictions, it is open to all faiths, except no faith. The personal welfare of their members is vital to all of those in the Eastern Star and it is considered a privilege to help another member whenever they can.

The stated purposes of the organization are: Charitable, Educational, Fraternal and Scientific; but there is much more to it than that. Dr. Rob Morris, the Poet Laureate of Masonry, founded the Order using beautiful and inspiring biblical examples of heroic conduct and moral values. These portray the noble principles which should adorn the personal loves of Eastern Star members. Eastern Star strives to take good people and through uplifting and elevating associations of love and service, and through precept and example, build an Order which is truly dedicated to charity, truth and loving kindness.

Concrete evidence of the charitable nature of the organization as it affects others is the millions of dollars which have been raised within the membership to support national, jurisdictional, and local charities. The Order of the Easter Star has contributed over $700,000 to the Cancer Research Center to fund research into the causes and cure of cancer.

Below: Brother David Bachhuber Worthy Grand Patron and Sister Patty Crotty Worthy Grand Matron present a check to CRC’s Dr. Abraham Eisenstark.

Donations to the Cancer Research Center, unless otherwise directed, go to three main funds.

**Eisenstark Scholarships and Internships.**
In conjunction with our research mission, Dr. Eisenstark engages promising students in order to enhance their scientific backgrounds. We have programs for high school students, undergraduate and graduate students and postdoctoral fellows. Each category has opportunities to participate in our research to one degree or another. For more information, contact Dr. Abraham Eisenstark.

**Ray Freese Memorial Fellowship in Cancer Research.**
This Fellowship supports a postdoctoral scientist who engages in basic research at CRC in the development of a professional career finding ways to reduce cancer deaths. Dr. Robert A. Kazmierczak is the most recent Raymond W. Freese Fellow at the CRC.

**The Pamela Dunn Legacy of Hope.**
Due to her dedication and contributions to cancer research, the CRC's Dr. Pamela Dunn Legacy of Hope was created in her honor. The legacy is used to recognize individuals, businesses and foundations who demonstrate a tangible interest in supporting the CRC. Income from these funds provide for instruments, books, and support for our scientists who receive fellowships, stipends and other financial help based on their training and experience.

We are very fortunate to receive tremendous support from fraternal organizations around the state. The Fraternal Order of the Eagles, The Order of the Eastern Star, and the Cosmopolitan Club of Columbia have for years generously supported our work. Friends of the CRC frequently obtain their employer’s help to make outright donations or participate in a company’s matching funds programs. When you participate in our annual Jim Kidwell Memorial Gala, whether by buying a table or sponsoring the event, your contribution goes to our biggest fund raiser of the year. Donations can be made through our once yearly direct mail appeal, through our web site’s paypal page or with memorial donation in memory of a loved one. An additional way you can contribute to our research is through a simple bequest in your will.

Your generous bequest can bring us all closer to the day when the terrible disease of cancer is finally eradicated from our society. It doesn’t matter whether your bequest to the Cancer Research Center is quite small or very large. All bequests have the real potential to save lives and to help thousands of people avoid the physical, mental and emotional suffering of cancer. We invite you to take advantage of the free gift planning services of our Development Office.

Our experience and knowledgeable staff can help you plan a bequest or trust that will accomplish all your specific estate objectives and give you the great personal satisfaction of knowing you have made a truly meaningful contribution to America’s ongoing war against cancer. Your personal situation will determine whether any type of bequest would be advantageous to you as well as the Cancer Research Center.

**Report from the Development Office:**
**2010 Grants, Foundations, Trusts & Organizations**

| Missouri State Employee Charitable Campaign | The Roma Eisenstark Memorial Scholarship |
| United Way of Alma | Mizzou Aerie & Auxiliary (F.O.E. 2730) |
| The Stafford Family Charitable Trust | Kemper Arena Pig Roast |
| The Cosmo Luncheon Club | Edward Petersheim |
| King’s Daughters (Myrtle Rapp’s Circle) | Nolan Schroeder Memorial |
| Boone Electric Community Trust | JE Dunn Construction Co |
| Order of the Eastern Star Sam’s Club #8163 | Patricia’s Wine Tasting Benefit |
| Walmart Store #80 | Garry Banks |
| Allen & Josephine Green Foundation | Nancy Banks |
| Rachel Rau “Women’s Golf Association” | John Pasucci |
| UMC Greek Week | Jack Bozarth |
| The Stafford Family Charitable Trust | Frieda Bozarth Snook |
| The Cosmo Luncheon Club | MFA Oil Foundation |
| King’s Daughters (Myrtle Rapp’s Circle) | Michael Klein |

**Tax-Free Donations From An IRA**

Did you know... that the Pension Protection Act of 2006 was extended through 2011? It allows you to satisfy minimum distribution requirements with charitable contributions up to $100,000 directly from your IRA to a qualified charity, like the Cancer Research Center. It also provides that any contribution made by January 31, 2011 can count for 2010 minimum distributions. These contributions don’t increase your adjusted gross income. You must be at least age 70.5 to qualify. Ask your financial advisor for more information.
Raymond Freese, a local builder, developer, and president of Boone County Lumber Company, was a member of the CRC Board of Trustees for 21 years, beginning in 1973. He worked tirelessly to secure funding and support for various CRC projects and was especially devoted to the CRC Gala. Ray lost his sister and several close friends to cancer and decided to do what he could to fight this lethal disease. Unfortunately, he lost his own battle with cancer in 1994. After his death, the CRC Board of trustees set up the Raymond W. Freese Memorial Fellowship. This fellowship is awarded to promising post-doctoral scientists for an initial one year appointment, with reappointment for additional years based on performance. The stipend is comparable to those awarded by the Health Sciences Center at the University of Missouri - Columbia. The major research project is prostate tumor therapy with genetically altered Salmonella. Applicants are expected to have (1) expertise in molecular genetics of bacteria, (2) willingness to develop a mouse testing model, (3) skills in writing grant proposals and manuscripts, (4) skills in presenting research results at national meetings, and (5) skills to develop projects independently and creatively.

Resumes may be submitted via one of the following:
University of Missouri campus mail to A. Eisenstark, 110 Tucker Hall
E-mail with attachments to eisenstarka@missouri.edu
Fax to 573-443-1202 or
mail to: Cancer Research Center, 3501 Berrywood Dr., Columbia, MO 65201

Freese Memorial Fellowship
The chance of getting cancer during your lifetime is one in two for men and one in three for women. That’s why the physicians and staff at Ellis Fischel Cancer Center continue to develop cutting-edge research and clinical trials, staying on the forefront of advancements in cancer care. We combine state-of-the-art technology with patient-centered care to treat the entire patient, not just the cancer. Learn more about Ellis Fischel’s services and programs at www.ellisfischel.org.
